

Important Safety Instructions

WARNING

- All work on the EVCS-Cube must be performed exclusively by trained and certified electrical specialists.
- Before commissioning, all cables and contacts must be checked to ensure they are de-energized.

IMPORTANT NOTICE

- The EVCS-Cube is an evaluation kit and is not intended for sale to end customers.
- It is solely for evaluating the phyVERSO Baseboard and Basecamp software.
- Neither the Basecamp software license nor the intended use of the kit permits resale to end customers.
- The assembly and operating manual is intended for certified electricians. Due to significant safety risks, this kit is unsuitable for non-specialist users.
- Keep the assembly and operating manual for future reference. The operator of the electrical system must be informed about the application and function of this protective device.

PROPER USE

- The EVCS-Cube is an evaluation kit and may only be operated in controlled and supervised environments.
- It must only be used in enclosed, dry, and heated spaces.
- The EVCS-Cube must be operated exclusively with the door closed and locked.
- All cables and connections must be mounted and plugged in only when the system is de-energized.
- Power supply to the kit or board is allowed only when the door is closed and locked.

ELECTRICAL CONNECTION AND INSTALLATION

- The electrical connection and installation must only be performed by a certified electrician.
- The electrician must ensure all cables are securely routed and connected to prevent accidental contact.
- Additional cables (e.g. Ethernet) must be routed through the side cable guide and connected only when de-energized. The power supply should only be activated after the door is closed and locked.
